Magnetic Patches with Handle

Stop material loss at worn spots in minutes, with no welding, gluing, or bolting. Kryptane® Magnetic Patches give operations and maintenance teams a fast, reliable way to contain material on worn metal walls and chutes, keeping production running until a permanent repair can be scheduled.

Each patch is made with Kryptane® polyurethane, formulated for extreme abrasion resistance, so your temporary fix holds up against the material flow that caused the wear.

SIZES AVAILABLE:

- Patch sizes: 6″x6″ and 12″x12″
- Thickness: 1/2″ thick
- Available with or without handle

MAGNETIC PATCH FEATURES:

- **Install in minutes with no tools.** Strong rare earth magnets lock the patch onto the worn metal surface, with no welding, adhesives, or fasteners. That means no hot work permits, no cure times, and no extra holes in equipment.
- **Stand up to abrasive material.** Kryptane® polyurethane resists wear so the patch keeps containing material while you plan a permanent repair.
- **Conform to slightly curved surfaces.** The 1/2″ thick construction gives the patch enough flex to seat against contoured walls and chutes for a secure, consistent fit.
- **Remove cleanly when repairs are done.** Choose the optional handle for fast, easy pull-off once the permanent fix is complete. There's no cutting, grinding, or scraping.
- **Size the patch to the problem.** Two sizes let you cover a small hole or a larger worn area without wasting material.
- **FDA compliant for dry bulk food handling.** Kryptane® polyurethane meets FDA compliance requirements, making these patches a dependable solution for food processing and handling operations where material safety is non-negotiable.
