

Kryptane Liner Application Information

Date: _____

Location: _____

Material handled: _____

Sieve analysis %s: _____

Particle size: _____

Shape (round, crushed, lusted, etc.): _____

Moisture content (slurry, dry, damp, etc.): _____

Drop height: _____ Drop angle: _____

Speed of conveyance: _____

Amount (tons/hr): _____ Are elevated temps involved?: _____

Present liner type and thickness: _____

Present attachment method: Bolted Welded Glued

Preferred attachment method for replacement liner: _____

Liner wear life: _____

Past history of other liners tried: _____

Problem being solved (sticking, abrasion, impact, noise, etc.): _____

Type of machinery or chute being lined (crusher feed chute, chute off of screen deck, belt transfer, holding hopper, etc.): _____
