

# CURB INLET HOOD

WATERWORKS  
POLYURETHANE PRODUCTS

The Argonics Curb Inlet Hood has proven to withstand direct hits from plow blades - they do not break or shatter like the cast iron parts they replace. Our Curb Inlet Hoods that were installed in 1997 are still in place and have needed no repair or replacement, unlike the cast iron versions which were replaced annually.

Custom text:  
"Dump no waste -  
Drains to waterways"

Slots insure correct  
bolt position and  
proper height

## BENEFITS

- Polyurethane absorbs shock produced by the impact of the plow blade
- Significantly lighter than cast iron - 22.5 lb. compared to 136 lb.
- Reduced cracking of adjacent concrete curbs
- Resistant to oils, greases and gasoline

All Argonics products are  
proudly made in the USA.

*"Damage to cast iron catch basin backs from winter plowing and snow removal operations was becoming very costly. The City of Marquette was looking for a way to prevent damage and reduce cost, so in 1997, Argonics installed seven urethane catch basin backs. These curb backs were placed in areas where replacement of the cast iron backs was an annual occurrence. **These original urethane backs are still in place and have never needed repair or replacement.** Marquette now has hundreds of urethane catch basin backs installed city-wide. There has been negligible damage on a couple of them due to the underbody of a plow tearing a corner, but the urethane basin snapped back into place without breaking or deforming. Our cost savings have been huge because of the significantly less seasonal labor and replacement equipment costs."*

Dave Miller, Supervisor, sanitary and storm sewer systems,  
City of Marquette Public Works Department
