

NOSE ROLLERS

Our nose rollers are the best-performing, longest-lasting nose rollers available. All rollers are tapered, preventing rocks and other debris from getting trapped under the belt. The taper also helps prevent mud from building up on the roller.

All nose rollers are supplied with our patented bearing protection system, a unique double seal and a watertight plug that offers maximum protection in the harsh operating environment. Our exclusive polyurethane nose roller promotes longer life and extended rod wear. The pull-out standoff allows for bolts up to 3/4" plus a variety of overall roller lengths.
