

Belt Wipers

Solutions for cleaning belts in environments from wet clay to frozen coal

KS02 - Double Durometer BeltWiper

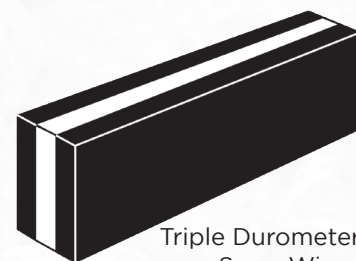

Utilizing an exclusive process, the two layers of the KS02 are chemically bonded, and will not separate in the harshest of environments. The harder durometer 93A scrapes the conveyor belt clean in rugged applications, while the softer durometer 70A produces a squeegee effect, removing water and giving the wiper more flexibility. KS02 is available in thicknesses ranging from 3/4" to 2".

Double Durometer
Belt Wiper

KS03 - Triple Durometer SuperWiper

Utilizing three chemically bonded layers, the KS03 is designed for use in environments where a harder polyurethane surface is needed. The KS03 has a softer 70A durometer sandwiched between two hard 93A durometer pieces of polyurethane. This provides an extremely tough scraping surface, yet maintains flexibility. This unique design also allows you to turn the wiper around when worn, giving you the longest wear life of any belt scraper on the market. KS03 is available in thicknesses ranging from 1" to 2".

Triple Durometer
SuperWiper

FEATURES AND BENEFITS:

- 60% less coefficient of friction than rubber
- Reduces drag on motor horse power used
- Available in 4", 5", 6", 8", 9", 10" & 12" widths
- Field tested with 8-10 times the wear life over quality rubber wipers
- Longer life wipers translate into lower maintenance and labor savings
- No more scraps — scrapers are sold by the inch so you only order what you need
- Nonporous — will not collect fines or other materials that can damage your belt
